# Introduction to the Quantitative Research Process

Denise Cauble

## Across

2. subset of the population selected for the study
6. gap in nursing knowledge
9. restrictions in a study that may decrease the generalizability of a study
12. strict adherence to the research plan
14. location of a study
16. information collected in a study
17. statements that are considered truth
20. the review of \_\_\_\_\_ documents why a study needs to be done
22. a smaller version of the proposed study to refine the methodology or data collection to be used in the larger study is called a \_\_\_\_\_ study
23. research findings
24. rules imposed to decrease the chance of error
25. research that involves the exploration and description of real-life situations

## Down

1. a type of quantitative research involving relationships between or among variables
3. identifies the goal or purpose of the study
4. type of nursing research for generating numerical information about the world
5. study blueprint; plan to maximize control over factors in a study
7. type of research that seeks knowledge for knowledge's sake
8. assigning numbers to variables
10. extension of the application of the findings from the sample to a larger population
11. deviation from the true or expected
13. \_\_\_\_\_ definition is the theoretical meaning of a concept or variable
15. a type of variable that can interfere with the outcome of a study
18. concepts in a study that are measured or manipulated
19. the theoretical basis of a study that may be expressed as a map or model (picture) or in narrative form and includes relational statements
21. research \_\_\_\_\_ summarizes the findings of a study
